

# Water Refiners

When you take a shower, do you smell chlorine or a “pool-like” smell? Have you learned that your local authorities use chlorine or chloramines to treat your water supply, and you would be more comfortable if you could remove the chlorine from the water before it comes out of your taps for your family’s bathing, cooking and drinking? Or would you like the benefit of being able to drink beautifully filtered water, without the effects of hard water?

An EcoWater refiner softens your family’s water by removing the hardness minerals and sediment that weren’t removed by the water board, and it also removes the chlorine taste and odour that is prevalent in our water.

By adding a layer of coconut shell carbon to the water refiner system, the objectionable odour and taste of chlorine is removed without the need for a costly carbon filter system and subsequent filter changes. Best of all, it’s safe to drink softened water, and filtering the water brings back a taste similar to bottled water taste – Softened filtered drinking water is very popular in the UK, across Europe, and the USA.

EcoWater offers water refiners in a single tank cabinet style or a two-tank system. Which is right for your home? Consider the amount of space available for the system, plus the hardness of your water. Hydroworks will give you expert advice on the benefits of a single versus two-tank systems.

Highly  
Efficient

Excellent  
Reliability

## ERR3700 SERIES

EcoWater's elite water softener system is our refiner, available in a single-tank design. It is highly recommended for municipal water supplies.

### Features of the ERR3700 Series:

- **HydroLink Plus® Wi-Fi and Smartphone App Monitoring**  
**HydroLink Plus®** – Wi-Fi enabled technology sends continuous and excessive water use, system error, low salt and service reminder alerts, including a water-to-drain sensing alert notifying you when an excessive amount of water is going to drain.  
**HydroLink®** – Patented two-way remote monitoring also available.
- **Water Meter** – Allowing for chemical feed dosing, flow switch operation and water use information.
- **Patented Electronics Digital Demand Module** – Sophisticated, yet easy-to-use electronics capture historical usage patterns to predict future needs for precise regenerations.
- **High Quality Fit and Finish with Dampened Hinge Salt Cover**
- **Multi-Wrap Fiberglass Reinforced Resin Tank** – Durable tank liner will not deteriorate, rust, or corrode.
- **Full One-Inch Riser with Self-Cleaning Distributors** – One-inch diameter for increased flow rates, which ensures that household demand is adequately met. Distributors exhibit excellent flow rates and are cleaned automatically by counter-current water pressure.
- **Coconut-Shell Carbon with Lifetime Warranty** – Filters the water throughout the home without compromising water flow. Reduces chlorine taste and odor, extends resin life and eliminates the need for a separate carbon filter and filter changes.
- **Patented Stratified Resin Bed with Lifetime Warranty** – Layered mix of fine and standard size resin provides superior filtration and iron removal without sacrificing flow rate capability.
- **Positive-Action Brine Valve** – Snap-together construction eliminates use of solvents that may contaminate water. Positive action helps prevent overfilling.
- **Automatic Salt-Level Detection** – Simply add salt, no salt level setting required. Our integrated sensor will detect the salt level and alert you when the salt level is low.
